

# PVC Drukreduceerventiel DMV 712R

0,3 tot 10 bar, afdichting EPDM membraan

**Nominal size DN 10–50**

**Nominal size 3/8“–2“**

**Nominal pressure PN 10 bar**

## Features

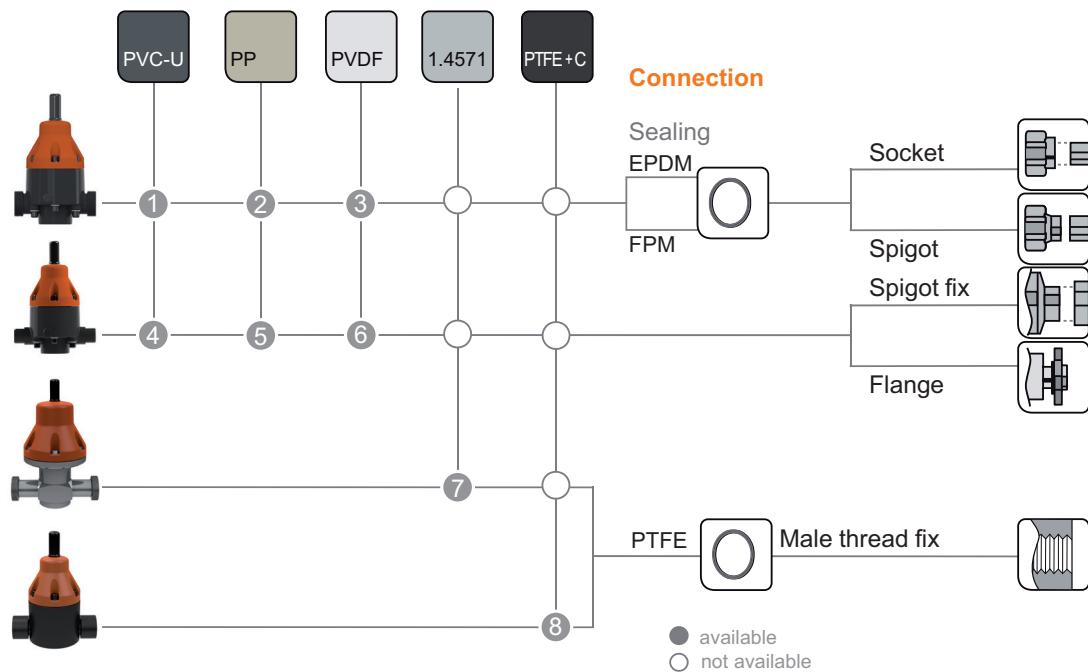

- pressure setting range 0.3 to 10 bar
- in resting position 100% not subject to back pressure, therefore well suited for use in metering points or injection points
- EPDM diaphragm, PTFE-coated on the medium side
- most powerful thermoplastic pressure relief valve with patented piston control
- for constant working pressures even with counter-pressure in the system
- constant, low vibration control behavior
- reliable reduction of pressure peaks and pulsations
- simple pressure setting possible at any time, even during operation

## Additional options on request

- silicone free
- pressure presetting
- alternative pressure setting range 0.3–4 bar
- pressure gauge
- pressure gauge hole
- sealed
- NSF certification
- Diffusion stop

# PVC Drukreduceerventiel DMV 712R

Diaphragm PTFE (EPDM)

Pressure setting range 0.3–10 bar

Pressure settings in 0.5 bar steps, between 0.5 and 10 bar

#### On Demand

- » Pressure Gauge Mountin
- » Sealing
- » Cleanin
- (Free of Surface Disturbing Substances)

» **Diffusion resistance** for Media which tend to Permeation - Valves with PTFE piston and PTFE (EPDM) diaphragm + ECTFE film Available Variants: PVC-U (FPM) | PVDF (FPM)

#### » Pressure Gauge Installation

Valves with 2 Threaded Holes G 1/4" incl. Plug

\* available in DN 15-50.  
\*\*only for socket welding.

# PVC Drukreduceerventiel DMV 712R

## Use

- chemical plant engineering
- industrial plant engineering
- water treatment

## Application

- as a pressure relief valve for constant counter pressure
- as overflow valve to protect the plant
- in connection with pulsation damper for low-pulsation dosing
- Not suited as equipment part with safety function according to the Pressure Equipment Directive.

## Valve function

- If the working or inlet pressure rises above the set value, the pressurized valve piston is lifted against the spring force. The valve opens and pressure is relieved into the secondary line (outlet side). The valve closes as soon as the working pressure at the valve piston is lower than the set spring pre-load.
- When in the case of the dynamic flow valve with set working pressure, counter pressure is generated on the outlet side, this pressure acts simultaneously underneath the active area of the diaphragm and on the loosely guided valve piston, i.e. the forces under the diaphragm surface and the piston cancel each other out. The valve lift and thus the working pressure remain virtually constant.

## Valve setting

- can be adjusted easily across the entire pressure range
- can be secured against unauthorized opening by sealing

## Flow medium

- Technically pure, neutral and aggressive fluids, provided that the selected valve materials coming into contact with the media are resistant at the operating temperature according to the ASV resistance guide.

## Flow direction

- always in the direction of the arrow, see graphics „sectional drawing“

## ASV resistance guide

[www.asv-stuebbe.de/pdf\\_resistance/300051.pdf](http://www.asv-stuebbe.de/pdf_resistance/300051.pdf)

## Process temperature

- See graphics „pressure/temperature diagram“

## Process pressure

- See graphics „pressure/temperature diagram“

## Nominal pressure ( $H_2O$ , 20 °C)

- PN 10 bar

## Size

- DN 10–50

## Pressure setting range

- 0.3–10 bar

## Working pressure

- equals set pressure plus flow-dependent pressure increase (see characteristic curves): approx. 0.3–10 bar

## Deviation from the working pressure

- up to 5 bar counter pressure: approx. ±0.3 bar
- over 5 bar counter pressure: approx. ±0.5 bar

## Opening pressure

- approx. 0.3–0.5 bar

## Hysteresis

- Difference between opening and closing pressure approx. 0.3 bar

## Actuation

- medium controlled

# PVC Drukreduceerventiel DMV 712R

## Device connection

- See graphics „pictograph pressure relief valve 712-R“

## Material with medium contact

Housing:

- PVC-U, PP, PVDF
- PTFE carbon-fiber reinforced (PTFE+C)
- stainless steel (1.4571)

Piston:

- PVC-U, PP, PVDF
- PTFE piston for medium (for example HF, HCl, HNO<sub>3</sub>), tending to permeation (penetration).

Sealing:

- EPDM, FPM, PTFE

Diaphragm:

- PTFE  
(EPDM diaphragm with PTFE coating on the side coming into contact with the medium)
- PTFE diaphragm with ECTFE coating for medium (for example HF, HCl, HNO<sub>3</sub>), tending to permeation (penetration).

## Material without medium contact

Bonnet:

- PP, glass fiber reinforced

Screws:

- stainless steel (1.4301)

## Mounting position

- as required

## Fastening

- via threaded inserts (metal inserts) in the valve body

## Color

Housing:

- PVC-U, gray, RAL 7011
- PP, gray, RAL 7032
- PVDF, opaque, yellowish-white
- PTFE, black
- stainless steel, unpainted

Bonnet:

- orange, RAL 2004

## Pressure gauge connection

The pressure relief valve can be factory fitted with a pressure gauge for neutral medium types.

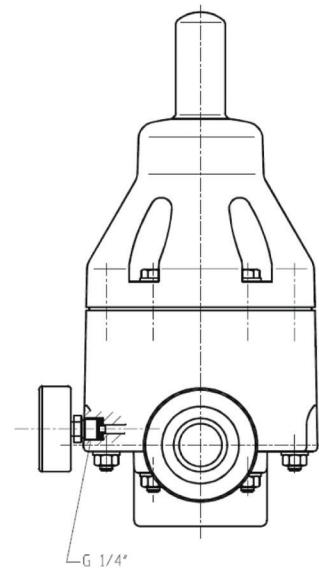

The resistance of the pressure gauge material has to be taken into consideration for other medium types.

## Pressure gauge

- Chemical version, damped
- Chemical version, undamped
- Contact pressure gauge

## Pressure gauge preparation

- Housing bore 2 x G 1/4" including plug.

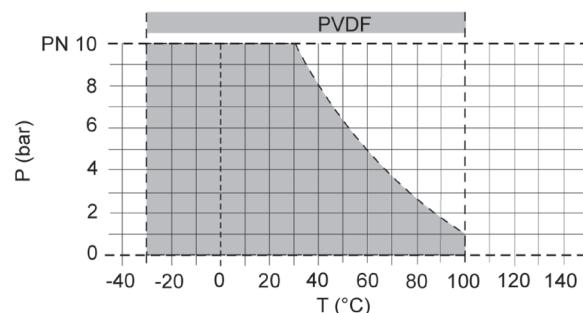

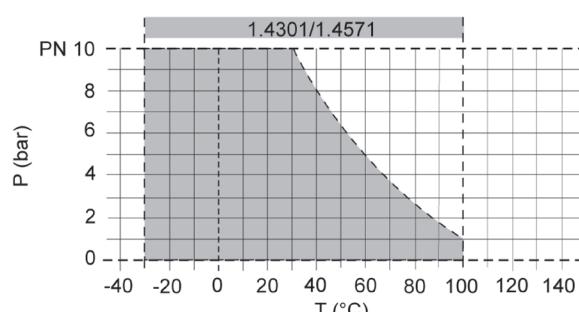

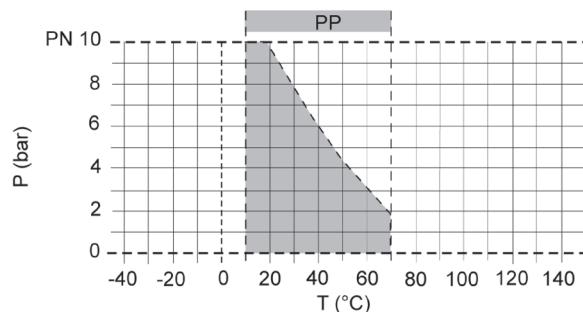

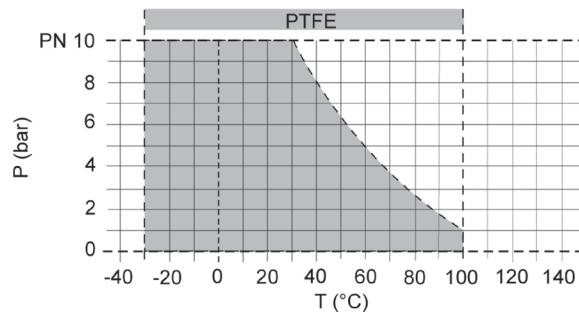

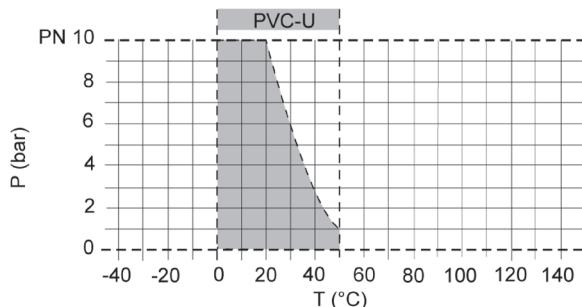

## Diffusion stop

- for medium tending to permeation: with PTFE piston and PTFE (EPDM) diaphragm + ECTFE coating

Versions available: PVC-U (FPM) | PVDF (FPM)

Pressure/temperature diagram

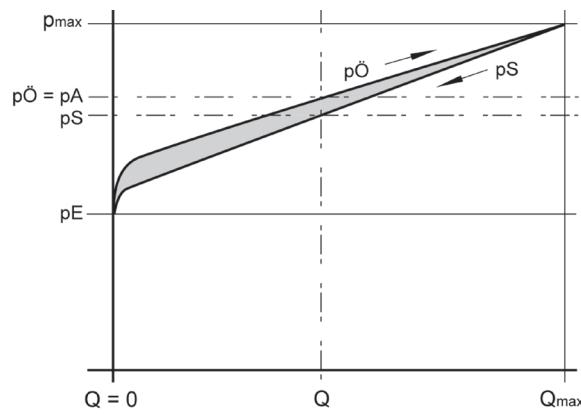

| Description |                    |
|-------------|--------------------|
| P           | Operating pressure |
| T           | Temperature        |

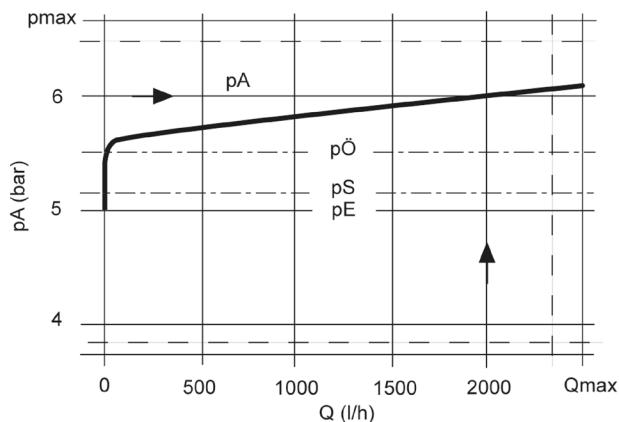

The pressure/temperature limits of the materials are valid for the stated nominal pressures and a service life of 25 years. These values are guide values for flow medium types which do not negatively impact the physical and chemical characteristics of the valve material. It may be necessary to take diminution factors into consideration. The operating life of the wear parts depends on the conditions of use.

| <b>Q</b>               | Flow             |
| <b>Q<sub>max</sub></b> | maximum flow     |

The valve is set tight at 5 bar.

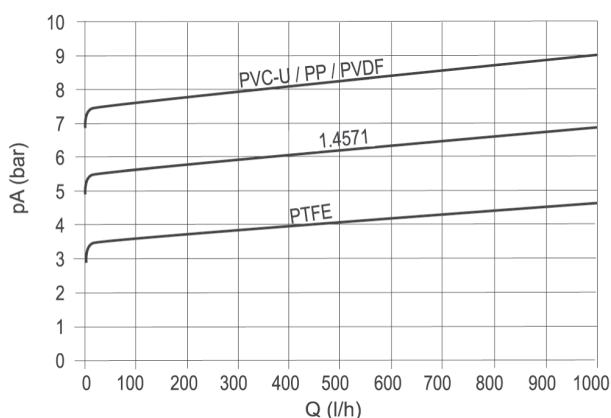

A flow of approx. 2000 l/h is reached at a pressure increase of 1 bar.

According to the curve, this results in the following values:

- Set pressure pE: 5 bar
- working pressure pA: 6 bar
- opening pressure pÖ: 5.5 bar
- closing pressure pS: 5.2 bar

## Applications for pressure relief valves

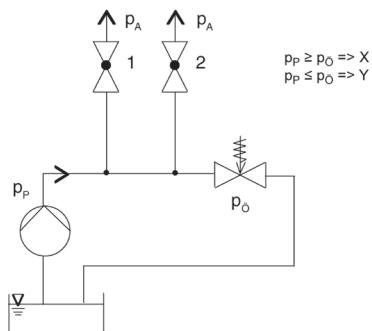

Example 1: Constant system pressure

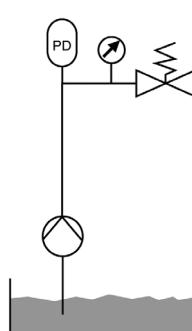

Example 4: Pressure relief valve as overflow valve;  
container pressure must not exceed max. pressure

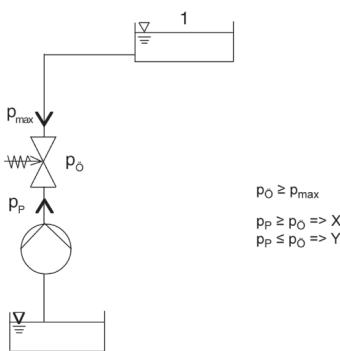

Example 2: Consumer 1 and/or 2 opens,  
pressure relief valve closes.

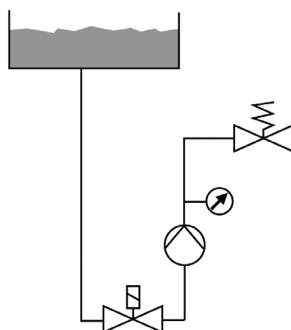

Example 5: Use in connection with pulsation damper  
for low-pulsation dosing.

Example 3: Pressure relief valve as backflow preventer

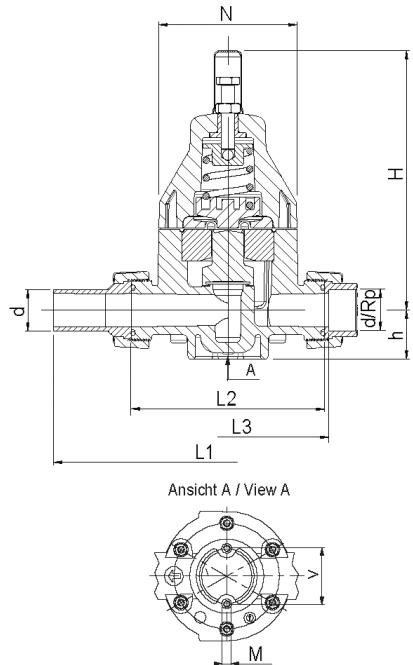

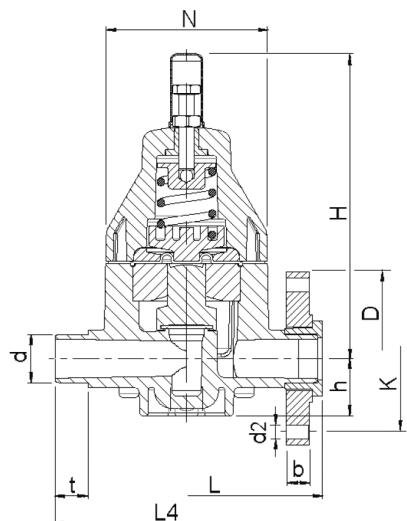

Example 6: Use with high primary pressure

## Description

|           |                  |
|-----------|------------------|
| $p_{max}$ | Maximum pressure |
| $p_A$     | Working pressure |
| PD        | Pulsation damper |
| $p_o$     | Opening pressure |
| $p_p$     | Pump pressure    |
| X         | Valve opens      |
| Y         | Valve closed     |
