

# PVC Drukreduceerventiel DHV 718

0,5 tot 10 bar, afdichting EPDM membraan

**Nominal size DN 8–50**

**Nominal size 3/8“–2“**

**Nominal pressure PN 10 bar**

## Features

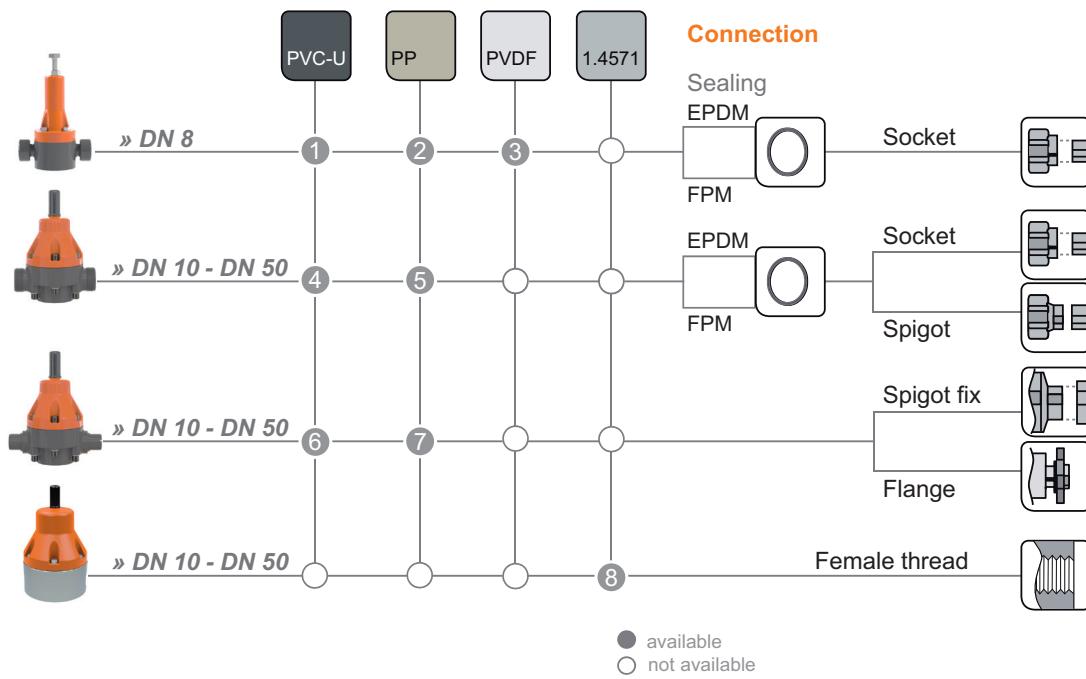

- pressure setting range 0.5 to 10 bar
- diaphragm controlled pressure relief valve
- simple design, reliable function
- particularly suitable for oscillating pumps
- constant, frictionless and low vibration control behavior
- high reproducibility of the set pressure
- simple pressure setting possible at any time, even during operation

## Additional options on request

- silicone free
- pressure presetting
- sealed
- NSF certification

# PVC Drukreduceerventiel DHV 718

Diaphragm: PTFE (EPDM)

Options: pressure settings in 0.5 bar steps

On demand: sealing  
cleaning (free of surface disturbing substances)

Pressure setting range:

0.5–10 bar

Basic Nominal Sizes:

DN 8 DN 10 DN 15 DN 20 DN 25 DN 32 DN 40 DN 50 DN 65 DN 80 DN 100 DN 125 DN 150 DN 200 DN 250 DN 300 DN 350 DN 400

# PVC Drukreduceerventiel DHV 718

## Use

- chemical plant engineering
- industrial plant engineering
- water treatment
- Electroplating plants

## Application

- The pressure relief valve which is directly controlled by the medium, is used in technical processing plants for keeping preset working pressures constant on the primary side.
- The pressure relief valve can also be used as an overflow valve to prevent pressure peaks. In this case, the pressure relief valve is fitted in a bypass line.
- Pressure relief valves are not safety valves in the sense of the pressure vessel directive.

## Valve function

- When the valve is closed in the position of rest, the diaphragm under the valve seat is only impinged by the low secondary pressure. Any rise in working or primary pressure lifts the diaphragm against the spring force. The valve opens and the pressure decreases.

## Valve setting

- can be adjusted easily across the entire pressure range
- can be secured against unauthorized opening by sealing

## Flow medium

- Neutral and aggressive fluids or fluids containing solid particles, provided that the valve components coming into contact with the fluids are resistant at the operating temperature in accordance with the ASV resistance guide.

### Note

**For nitric or sulphuric acid, please contact us and indicate the exact operating conditions!**

## Flow direction

- always in the direction of the arrow, see graphics „Sectional drawing“

## ASV resistance guide

[www.asv-stuebbe.de/pdf\\_resistance/300051.pdf](http://www.asv-stuebbe.de/pdf_resistance/300051.pdf)

## Process temperature

- See graphics „Pressure/temperature diagram“

## Process pressure

- See graphics „Pressure/temperature diagram“

## Nominal pressure ( $H_2O$ , 20 °C)

- PN 10 bar

## Size

- DN 8–50

## Pressure setting range

- 0.5–10 bar

## Working pressure

- is the set pressure plus flow dependent pressure increase (see characteristic curves): 0.5–10 bar

## Opening pressure

- DN 8: 0.5 bar
- DN 10–50: 0.3 bar

## Hysteresis

- Difference between opening and closing pressure approx. 0.3 bar

### Note

- When the valve is in the position of rest, the counter-pressure (secondary pressure) may be approx. 4 times higher than the set pressure  $p_E$ , the valve remains closed.
- Return flow is excluded by the DHV718

# PVC Drukreduceerventiel DHV 718

## Actuation

- medium controlled

## Device connection

- see graphics „Pictograph pressure relief valve DHV 718“

## Material with medium contact

### Housing:

- DN 8: PVC-U, PP or PVDF
- DN 10–50: PVC-U, PP or stainless steel A4 (1.4571)

### Diaphragm:

- PTFE  
(EPDM diaphragm, PTFE-coated on the medium side)

### Sealing:

- FPM, EPDM

## Note

Please observe that the material PTFE is classified as resistant to several media, however, is not diffusion-tight, in particular, if used as film such as, for example, the ASV diaphragms.

For borderline cases (Azotic acid or Sulfuric acid), please contact us.

## Material without medium contact

### Bonnet

- PP, glass fiber reinforced

### Screws:

- stainless steel A4 (1.4301)

## Mounting position

- as required

## Fastening

- via threaded inserts (metal inserts) in the valve body

## Color

### Housing:

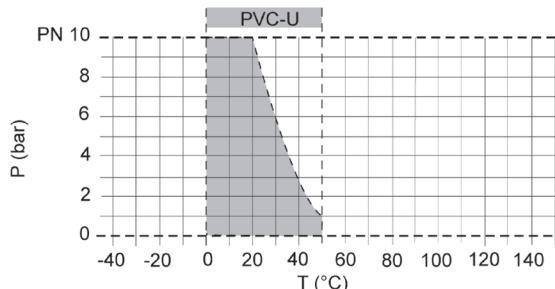

- PVC-U, gray, RAL 7011
- PP, gray, RAL 7032
- PVDF, opaque, yellowish-white
- stainless steel, unpainted

### bonnet:

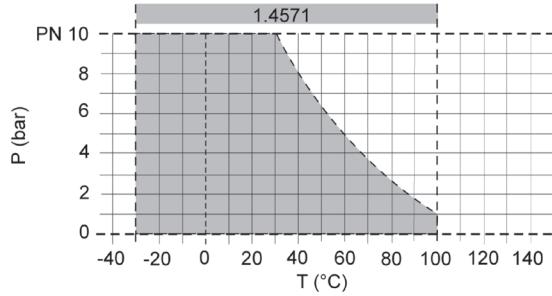

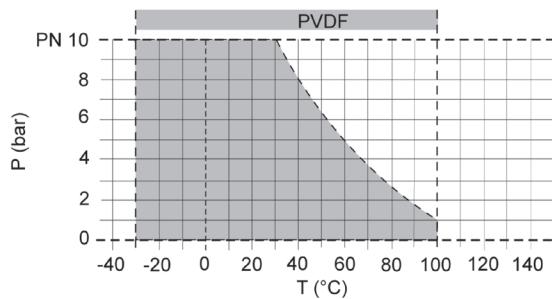

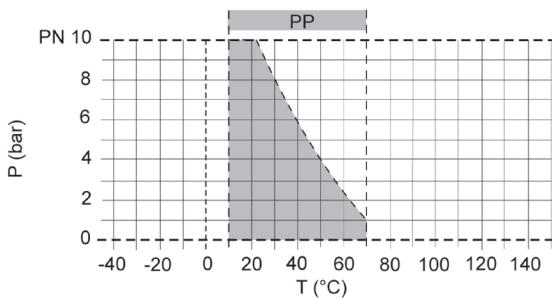

- orange, RAL 2004

# PVC Drukreduceerventiel DHV 718

## Pressure/temperature diagram

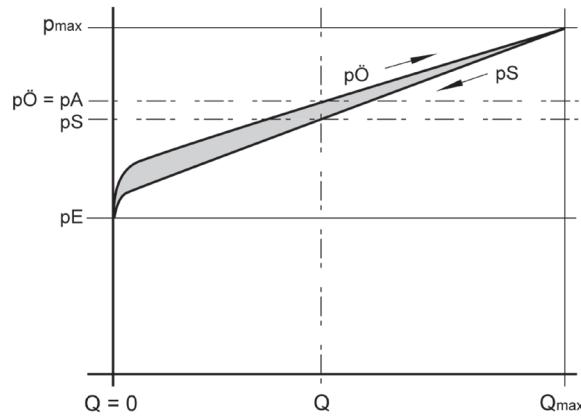

The pressure/temperature limits of the materials are valid for the stated nominal pressures and a service life of 25 years. These values are guide values for flow medium types which do not negatively impact the physical and chemical characteristics of the valve material. It may be necessary to take diminution factors into consideration. The operating life of the wear parts depends on the conditions of use.

Description	
P	Operating pressure
T	Temperature

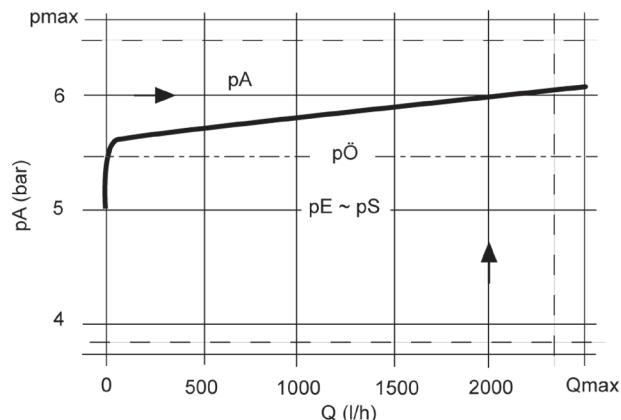

# PVC Drukreduceerventiel DHV 718

## Operating behavior

Description	
p <sub>max</sub>	Maximum pressure
p <sub>A</sub>	Working pressure
p <sub>E</sub>	Set pressure
p <sub>A</sub> -p <sub>E</sub>	Flow-dependent pressure increase
p <sub>Ö</sub>	Opening pressure
p <sub>S</sub>	Closing pressure
p <sub>Ö</sub> -p <sub>S</sub>	Hysteresis
Q	Flow
Q <sub>max</sub>	Maximum flow

## Characteristic curve, design example

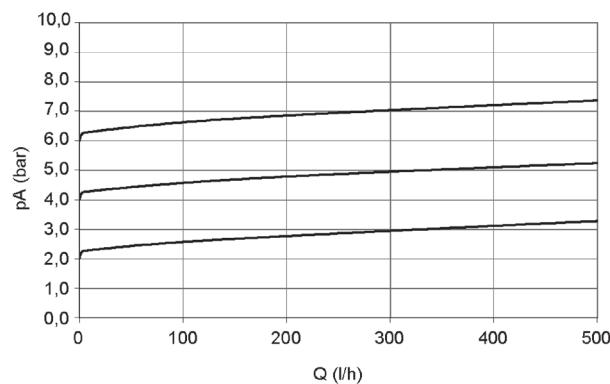

Description	
p <sub>max</sub>	Maximum pressure
p <sub>A</sub>	Working pressure
p <sub>E</sub>	Set pressure
p <sub>Ö</sub>	Opening pressure
p <sub>S</sub>	Closing pressure
Q	Flow
Q <sub>max</sub>	Maximum flow

The valve is set tight at 5 bar.  
A flow of approx. 2000 l/h is reached  
at a pressure increase of 1 bar.  
According to the curve, this results in the following values:  
Set pressure pE: 5 bar  
working pressure pA: 6 bar  
opening pressure pÖ: 5.5 bar  
closing pressure pS: 5 bar

<b>pA</b>	Working pressure
<b>Q</b>	Flow

**Pressure loss curve (standard values for H<sub>2</sub>O, 20 °C)**

**Description**

<b>Δp</b>	Pressure loss
<b>Q</b>	Flow

**Pressure loss and k<sub>v</sub> value**

The diagram shows the pressure loss  $\Delta p$  in relation to the flow  $Q$ .

**Conversion formulas**

$$c_v = k_v \times 0.07$$

$$f_v = k_v \times 0.0585$$

**Units:**
 $k_v$  [l/min]

 $c_v$  [gal/min] US

 $f_v$  [gal/min] GB

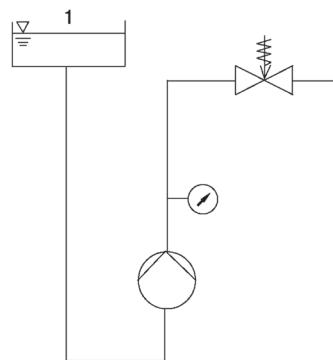

# PVC Drukreduceerventiel DHV 718

## Applications for pressure relief valves

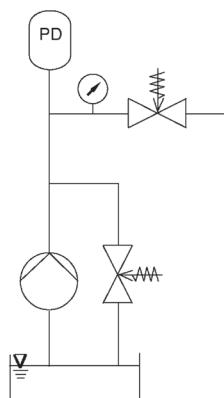

Example 1: Generation of a constant operating pressure

Example 2: Use with high primary pressure

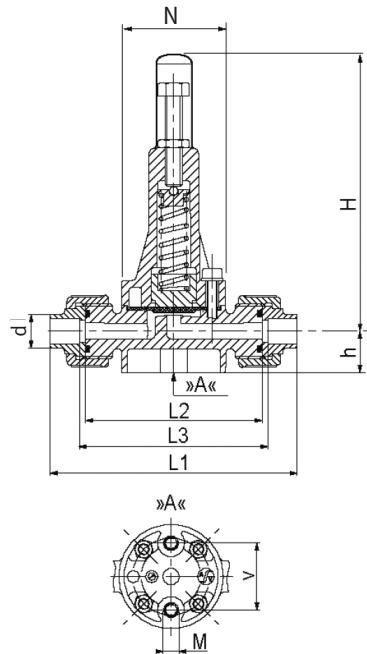

Example 3: Reduction of pressure impacts due to an overflow valve to protect the plant
